The Candle Garden App

Simple steps to open the test version on your Android phone

Before you start

You need an **Android phone** and this page (or the install link). This is a private test copy. It is not in the Google Play Store yet, and it is not TestFlight (that is iPhone only).

How to open the app

1. On your Android phone, open the Camera app and point it at the code on this page. Or open the install link we sent you.
2. Tap the banner or link. It opens a page to install **The Candle Garden App**.
3. Tap **Install** or **Download**. If the phone says the file is from an unknown source, tap **Allow** or **Install anyway**.
4. When it finishes, tap **Open**. You can also find it in your app list.
5. The first time you try the refill camera, tap **Allow** if asked.

Scan to install
The Candle Garden App

Android test copy
(not the Play Store)

If you get stuck

• Use Chrome or the phone's browser if the link does not open.
• If Android blocks the install, open **Settings** → **Security** (or the browser's prompt) and allow installs from that source, then tap the link again.
• Look in your downloads or app list for **The Candle Garden App**.
• After a new test update, uninstall the old copy and install again from this page.
