The Candle Garden App

Simple steps to open the test version on your iPhone

Before you start

You need an **iPhone** and the email that received the TestFlight invite. This is a private test copy — it is not in the public App Store yet.

If you open that email **on your iPhone**, just tap the button. You do not have to scan a code. Scan the code only if you still need to install TestFlight.

How to open the app

1. On your iPhone, open the TestFlight **email invite**.
2. Tap **View in TestFlight** or **Start Testing**. (No need to scan anything if you do this on the phone.)
3. If your phone asks you to install TestFlight, you can tap **Install** — or open Camera and scan the code on this page.
4. When TestFlight opens, tap **Accept**, then tap **Install** next to **The Candle Garden App**.
5. When it finishes, tap **Open**. You can also open it from your Home Screen.
6. The first time you try the refill camera, tap **Allow** if asked.

Scan to install TestFlight

Then open your invite email to get The Candle Garden App.

If you get stuck

- Use the **same Apple ID** that received the invite.
- Open the TestFlight app and look for **The Candle Garden App**. Tap **Install** or **Open**.
- If the invite expired, ask us to send a new one.
- After a new test update, close the app completely (swipe it away) and open it again.
